Rapport-preuve — Validation des *datasets* extraits (NS4KGE)

Corpus : **55 articles** — Source : Configurations[].Dataset (prompt2) — Validation contre `load_md_tables_only()` (tables uniquement).

1. Définitions & méthodologie

Terme	Définition
TP	dataset extrait par le KG ET présent dans les tableaux de l'article
FP	dataset extrait par le KG mais absent des tableaux
Candidat FN	dataset présent dans une cellule <table> mais non extrait
Précision	TP / (TP + FP)
Recall relatif	TP / (TP + candidats FN en table de résultats)

Matching : insensible à la casse ; séparateurs -_/.@ tolérés ; frontières strictes (FB15k =/= FB15k-237, datasets distincts) ; recall cherché uniquement dans les blocs <table> ; tableaux classés stats vs résultats via leur caption.

2. Résultats globaux

Indicateur	Valeur
Datasets extraits (lignes vérifiées)	184
Validés (TP)	182
Non validés (FP)	2
Précision (micro)	**98.9%**
Candidats FN en table de résultats	5
Candidats FN en table de stats (ignorés par le prompt)	1
Recall relatif (micro)	**97.3%**
Vocabulaire global de datasets	73

3. Analyse des erreurs

3.1 Faux positifs (extraits mais absents des tableaux)

Article	Dataset extrait
CondConstraints.md	Table 1 Dataset
GNS.md	FB13 (FB13_reduced)

3.2 Candidats faux négatifs — table de résultats

Article	Dataset	Table	Citation
